CONNECTING THE NEXT GENERATION

*Keeping You In The Loop - December 2022*

## Happy Holidays!

TLC would like to take this opportunity to thank all our customers for making 2022 another successful year! We know that there are choices in the fiber optic cable market and we are extremely appreciative that we have such loyal customers. We also know that without our customers, TLC would not survive. Again, we thank you for your ongoing business and are looking forward to an excellent and prosperous 2023 for all!

*Again, a sincere thank you and best wishes from all of us at TLC!!*

## Ask Engineering

---

### **Product Notification:**

Beginning 1/1/23, in an effort to streamline manufacturing to be more efficient and have more stock available for our customers, TLC is discontinuing the polypropylene inner tubes for the Furcation Tubing product line and will be replaced with the low density polyethylene (LDPE) inner tubes presently used in the other tubing products. The LDPE inner tubes are more flexible, have a better memory and offer better kink resistance. The "U" in the part number represents the LDPE inner tube instead of the "R" which represented the discontinued inner tubes. Example: F00FR2NUA instead of F00FR2NRA. Succinctly a better product; samples are available upon request.
